Education

Indian Institute of Technology Guwahati — Assam, India
B.Sc in Data Science and Artificial Intelligence, Specilization in Machine Learning — *Sept. 2024 – Sept. 2028(Present)*

Sunbeam School Rohania — Uttar Pradesh, India
Secondary High School — *May 2022 – May 2023*

Experience

AI Prompt Engineer — June 2025 – Present
Freelance / Training-Based Work — *Remote, India/USA*

- Engineered **150+ structured prompts** for coding, content creation, debugging, and automation workflows.
- Reduced output ambiguity and hallucinations by **30–40%** through optimized prompt chaining and constraints.
- Improved task completion accuracy by **25%** by refining context design, role prompting, and output formatting.
- Applied prompt-engineering principles across **5+ web and documentation projects**, improving clarity and usability.

Digital Marketing & Full-Stack Web Projects Contributor — Sep. 2024 – Present
Freelance / Self-Initiated Work — *Banglore, India*

- Developed **6+ small-scale web projects** using basic front-end and back-end stacks for student clubs and internal use.
- Designed **10+ landing pages and UI flows**, improving user navigation and reducing bounce rate by ˜20%.
- Assisted in content planning and basic SEO structuring, increasing page visibility and reach by **15–25%**.
- Applied analytics-driven insights to improve engagement, resulting in **˜18% higher user interaction**.

Industry Project Contributor (Under Mentorship) — Dec 2021 – Oct 2023
OLA , UrbanClap , Tata EZ Home — *India*

- Contributed to **Battery Management System (BMS)**-related tasks for **Ola S1 Pro**, supporting validation and testing phases.
- Supported testing and feature work for **UrbanClap (Urban Company) RO systems** through guided assignments.
- Provided technical inputs for **3+ Tata EZ Home automation modules** under direct project mentorship.

Projects

R.A.M.B.O | *Python, C/C++, Fusion* — June 2025 – Sept 2025

- Designed and modeled **100% of mechanical components** in Fusion for a complete autonomous robotic structure.
- Implemented autonomous movement and behavior logic using **Arduino IDE**, integrating **5+ sensors** for navigation and decision-making.
- Achieved **stable autonomous operation with 90% movement accuracy** through calibrated control logic and sensor fusion.
- Integrated hardware, electronics, and software into a **fully functional end-to-end robotic system**, validated through multiple test cycles.

Technical Skills

Languages: Java, Python, C/C++, SQL (mySQL), JavaScript, HTML/CSS, R
Developer Tools: Android Studio, Fusion, AWS, Google Cloud Platform, Visual Studio Code, PyCharm, IntelliJ, Eclipse
Libraries: pandas, NumPy, Matplotlib
